Preface	5
1 Low dimensional geometric algebras	7
1.1 Linear algebra background	8
1.2 GA of the Euclidean plane, $\mathcal{G}_2$	13
1.3 GA of the Euclidean space, $\mathcal{G}_3$	18
1.4 GA of the Minkowski space, $\mathcal{G}_{1,3}$	26
1.5 Exercises	33
2 Conformal geometric algebra	37
2.1 Ground notions	37
2.2 Inner representations	42
2.3 Outer representations	44
2.4 Transformations	47
2.5 Exercises	51
3 Minkowski's space-time	55
3.1 From physics to geometry and back	56
3.2 A GA view of the Lorentz group	61
3.3 A GA view of electrodynamics	64
3.4 A GA view of Dirac's equation	70
3.5 Exercises	72
4 Robot kinematics	75
4.1 Classical kinematics	75
4.2 Forward kinematics	79
4.3 Differential kinematics	82
4.4 Inverse kinematics	85
4.5 Identification of singularities	94
4.6 Exercises	96

5	Molecular geometry	97
5.1	Distance geometry	97
5.2	Discretizable Molecular Distance Geometry Problem	98
5.3	Cartesian and internal coordinates	99
5.4	Geometric algebra approach	101
5.5	Uncertainties from NMR data	103
5.6	Conformal geometric algebra approach	104
5.7	Exercises	110
	References	111
	Index	119
