|----------|----------------------------------------------------------|----|
| <b>1</b> | <b>Mathematical Background</b>                           | 1  |
| 1.1      | General Notions on Groups                                | 1  |
| 1.2      | Linear and Multilinear Algebra                           | 4  |
| 1.3      | Metrics                                                  | 10 |
| 1.4      | Algebras                                                 | 12 |
| 1.5      | Exercises                                                | 18 |
| <b>2</b> | <b>Grassmann Algebra</b>                                 | 23 |
| 2.1      | Exterior Algebra                                         | 23 |
| 2.2      | Contraction Operators for $\Delta E$                     | 28 |
| 2.3      | The Metric Grassmann Algebra                             | 31 |
| 2.4      | The Inner Product                                        | 33 |
| 2.5      | Exercises                                                | 37 |
| <b>3</b> | <b>Geometric Algebra</b>                                 | 41 |
| 3.1      | Axioms                                                   | 42 |
| 3.2      | Existence of Full Geometric Algebras                     | 46 |
| 3.3      | The Grassmann's Grading and the Outer and Inner Products | 49 |
| 3.4      | Pseudoscalars                                            | 54 |
| 3.5      | Exercises                                                | 56 |
| <b>4</b> | <b>Orthogonal Geometry with GA</b>                       | 63 |
| 4.1      | O and SO                                                 | 64 |
| 4.2      | Versors and Pinors                                       | 67 |
| 4.3      | Spinors and Rotors                                       | 69 |
| 4.4      | Rotations in the Euclidean Space                         | 72 |
| 4.5      | Exercises                                                | 75 |
| <b>5</b> | <b>Zooming in on Rotor Groups</b>                        | 77 |
| 5.1      | Examples of Rotor Groups                                 | 78 |
| 5.2      | Plane Rotors                                             | 87 |
| 5.3      | Infinitesimal Rotations                                  | 89 |

|          |                                  |     |
|----------|----------------------------------|-----|
| 5.4      | Infinitesimal Rotors .....       | 93  |
| 5.5      | Exercises .....                  | 103 |
| <b>6</b> | <b>Postfaces</b> .....           | 107 |
| 6.0      | Prelude .....                    | 107 |
| 6.1      | Topology Background .....        | 109 |
| 6.2      | Grassmann's Heritage .....       | 114 |
| 6.3      | The Development of GA .....      | 115 |
| 6.4      | Applications .....               | 125 |
| 6.5      | In the Light of Lie Theory ..... | 128 |
|          | <b>References</b> .....          | 137 |
|          | <b>Index</b> .....               | 145 |
